

**DEPARTMENT OF AGRICULTURE ENVIRONMENT AND RURAL AFFAIRS  
DAERA**

**EXPORT OF OVINE OOCYTES/EMBRYOS TO GB on EHC 2120**

**OWNER DECLARATION**

Name of Exporter:

Address:

Establishment number:

**Movement History for past 2 years before collection of oocytes/embryos:**

**GUIDANCE FOR COMPLETING MOVEMENT TABLE**

(a) The table accommodates 4 donors. For more than 4 donors use another VSSPT.

If any donor has moved more often than the table allows, please add a schedule to describe those additional movements. If there are fewer moves, insert N/A at Second, Third and/or Fourth as appropriate.

(b) Provide movement history for at least 2 years.

(c) The owner and CO must liaise to establish disease clearances for periods when the donor/s resided outside NI, apart from GB.

(d) For periods of residency in GB, request DAERA to contact APHA for disease clearances

I, the operator of the above establishment, declare that:

- (a) The above animal resided in Northern Ireland for at least the 2 years before collection of the oocytes/embryos.
- (b) \*For imported animals, I can provide a copy of the incoming health certificate(s) for the donor animal.
- (c) At the time of collection, the donor animal is not to be destroyed under a scheme to eradicate a contagious or infectious disease to which ovines are susceptible.
- (d) The donor animal comes from a holding not restricted for  
Brucellosis  
Rabies  
Anthrax
- (e) The donor animal has not been in contact with cattle or pigs from a holding in a protection zone for foot and mouth disease, swine fever, brucellosis and Teschen disease.
- (f) At the time of collection, the donor animal and its holding are not subject to restrictions for the control of foot and mouth disease.

(g) The donor animal is from a holding and has only been in contact with animals in the holding where the following diseases have not been diagnosed:

- Contagious agalactia of sheep in the previous 6 months
- Paratuberculosis or caseous lymphadenitis in the previous 12 months
- Pulmonary adenomatosis in the previous 3 years

AND

- \*Maedi Visna in the previous 3 years and Caprine viral arthritis/encephalitis in the previous 3 years OR
- \*The donor was in herd with other animals infected with Maedi Visna or caprine viral arthritis/encephalitis and these infected animals have been slaughtered and the remaining animals reacted negatively to two tests.

(h) The donor animal is part of a scrapie monitored flock since birth or at least the last 2 years before oocyte/embryo collection and in which scrapie has not occurred in the 2 years before oocyte/embryo collection.

\*Indicates to delete whichever is not applicable.
