3 BT								█	█
Fry Raceways 16	-	-	-	-	-	-	-	█	█
25 + 22 RT	1-2 %	Few fish in rear of unit	-	-	Evidence of BGD moderate infection	Pin head fry	-	█	█
21 BT	1-2 %	-	-	-	-	-	-	█	█
27 + 30 RT	1-2 %	Few fish in rear of unit	-	-	Evidence of BGD moderate infection	Pin head fry	-	█	█

*Take pond, tank, cage, raceway, trough, incubator, house number from farm layout map/sketch

Details of abnormal mortality events since the last inspection?

Late Rainbow trout fry =< 1 g, displaying bacterial gill infection typical of first feeding in fry larger fish are combating this infection well.

Farm manager's comments/ assessment of health of stock and disease problems encountered

None

Comments

Farm in good order, larger stock in good shape, and low stocking density.

Further action (if any) agreed with farm manager

Follow up with transport documents

Transport documents [REDACTED] received 14-04-2025. See CM container. [REDACTED] 17-04-2025

Signed (Inspector) [REDACTED] Date 11th April 2025

Senior Fisheries Officer / Vet Comments / Proposed New Establishment Risk Ranking

I did not attend this inspection however given [REDACTED] expertise and the accompanying evidence I am content that the report is accurate.
Air-drying of tanks is not sufficient, tanks must be disinfected with a suitable disinfectant before or after each use.
I am content that the risk ranking is reduced to LOW

Senior Fisheries Officer / Vet signature [REDACTED]

Date 15/04/2025__

Fish Culture License

	Yes ✓	No ✓	Comment
