Department of Agriculture, Environment and Rural Affairs
Tables updated September 2026

This table provides valuations for white laying hens in organic production systems with outdoor access, producing eggs for human consumption. The table is based on white strains and is not suitable for brown laying hens or for specialist breeds with higher pullet costs.

The valuation is based on a maximum age of 100 weeks. If a flock is marginally older than this at the time of the outbreak, the final valuation shown here can still be used. For a younger flock expected to substantially exceed 100 weeks of age, a separate valuation may be required.

For flock ages that do not exactly match the weekly valuation increments, the appropriate pro-rata figure should be calculated.
