Issue

Withdrawal of Suspension Notice

Please complete to show the factors that have been considered

Summary	Positive Considerations	Negative Considerations
Decision Document for the withdrawal of suspension notice. Suspension Notice Issued 20th June 2013 as a result of imminent risk of serious pollution. The imminent risk involved in filling of waste in Phase 9 of the landfill without the required engineering containment system. Steps required to be taken to remove the risk: - Construct the engineered containment system for Phase 9 of the Landfill - Submit proposals, for the Chief Inspectors approval, for the application of an appropriate intermediate cover across the landfill complete with implementation timescales. (Works completed in 2013) Site Closure Report (SCR) provided October 2016 proposing to place a permanent cap across the existing landfill and restore the site with inert materials to an appropriate profile. CQA Plan for capping the existing landfill and lining the inert landfill submitted 19th October 2017 and approved 23rd October 2017. CQA Validation Report for Phase 1 of capping and lining submitted 18th December 2017 and approved 4th January 2018.	CQA Plan and Validation Report for capping and lining provided and approved. Site will be restored to final levels, using only inert waste. Surface Water and Groundwater monitoring points around the site will continue to be monitored. A 5m buffer zone will be maintained around leachate and gas infrastructure on top of the site to ensure no impact to the extraction process.	

Document

On the detail outlined above, I recommend that the Suspension Notice is lifted.

Permit variation application now required, to include a revised site management plan, waste acceptance codes and change of company name.
