Dear [REDACTED]

FRANCIS O'HARA MOY PARK FARMER APPLICATION NUMBER: P0629/25A

The Public Health Agency (PHA) has considered the above application and wishes to make the following comments based on the information available within the application.

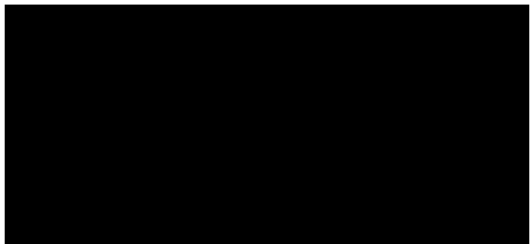

This application is for a new permit for a site with a proposed maximum capacity of 64,500 places for poultry at lands approximately 35m northwest of 95 Moorfields Road, Ballymena, Co. Antrim, BT42 3HH.

Such facilities have a theoretical potential to cause adverse human health effects from but not limited to exposure to odour, dust, ammonia and noise.

Taking account of the information provided to support this new application, we note that BAT and mitigation measures detailed regarding foreseeable emissions to air and other controls provide theoretical reassurance that facility operations should ensure impact on public health is minimal. If the applicant carries out all measures as outlined, the PHA would be satisfied with the application.

I trust the above comments are helpful.

Yours sincerely

Chief Executive

Our Ref CEx-12-06

Dear

HERFORD ARNOLD, APPLICATION NUMBER: P0637/26A

The Public Health Agency has considered the above application and wishes to make the following comments based on the information available within the application.

This application is for a new permit for an existing site which is to be renovated to house a maximum of 110,000 broilers across 5 sheds at 30 Lisnasure Road, Armagh, BT66 7NN. Such facilities have a theoretical potential to cause adverse human health effects from but not limited to exposure to odour, dust, ammonia and noise.

The air quality impact assessment has omitted 2 residential properties at 30 and 30A Lisnasure Road. While there may be consenting adults at this address, I would be concerned about the health of residents, in particular children and other vulnerable groups. There must be confidence in the predicted emission levels with sufficient mitigation measures implemented to ensure they will not impact upon the health of residents.

I trust the above comments are helpful.

Yours sincerely

Chief Executive

Your Ref: P0531/16A

Dear [REDACTED]

Thanks for forwarding the IPPC application in respect of:

SIMON MCKINSTRY

The Public Health Agency has considered the above application and wishes to make the following comments based on the information available within the application documents. I note that this is an application for two broiler houses at 29 Ballycross Road, Banbridge BT32 4HS.

The principal potential public health concerns in relation to such facilities would be emissions to air, land and water (odour, gases, effluent etc) and the possibility of noise.

If the applicant carries out all the mitigation measures during the construction and operational phases as outlined in the application then the Public Health effects would be minimal and the Public Health Agency would have no immediate concerns regarding adverse health effects of the facility related to IPPC issues.

I would ask you to note that no comments are offered with regard to the occupational exposure relating to those who may work within this facility.

We would also point out that in the event of any outbreak of infectious/non infectious diseases in the area at any time in the future, the Public Health Agency will be obliged to conduct an

epidemiological investigation regardless of whether or not this is deemed to be associated with the facility.

The above advice is subject to review in the light of future advances in the knowledge of the public health implications of these facilities.

I trust the above comments are helpful and would be pleased to enlarge upon them if necessary.

Yours sincerely

Our Ref: CEx-09-07

Dear [REDACTED]

Applicant: Lee McKinstry Moy Park - P0630/25A

The Public Health Agency (PHA) has considered the above application and wishes to make the following comments based on the information available within the application.

This application is for a new Part A permit for an installation consisting of two houses with a maximum capacity of 74,000 broiler birds at 19 Drumconwell Road, Lisnadill, Armagh, BT60 2AT.

Such facilities have a theoretical potential to cause adverse human health effects from but not limited to exposure to odour, dust, ammonia and noise.

The air quality impact assessment dated 4 July 2025 has omitted a residential property, 19 Drumconwell Road Road, adjacent to the farm site. While there may be consenting adults at this address, I would be concerned about the health of residents, in particular children and other vulnerable groups. There must be confidence in the predicted emission levels with sufficient mitigation measures implemented, to ensure they are reduced to levels that are unlikely to impact upon residents in order to protect their health.

Yours sincerely

Dear ██████████

Applicant: Stephen McKinstry
Application Number: P0628/25A

The Public Health Agency has considered the above application and wishes to make the following comments based on the information available within the application.

This application is for a new permit for a site with a proposed maximum capacity of 79,000 places for poultry at lands approximately 100m North East of 18 Killyfaddy Road, Armagh, BT60 2PT. Such facilities have a theoretical potential to cause adverse human health effects from but not limited to exposure to odour, dust, ammonia and noise.

The odour management plan has omitted a residential property at 20 Killyfaddy Road owned by the applicant. While there may be consenting adults at this address, I would be concerned about the health of residents, in particular children and other vulnerable groups. There must be confidence in the predicted odour levels with sufficient mitigation measures implemented to ensure they will not impact upon the health of residents. The property should also be considered in exposure to other pollutants including dust, ammonia and noise.

I trust the above comments are helpful.

Yours sincerely
